

Equotip 550 Leeb

Hardness testing on transmission gears

Transmission gears of heavy cranes are very important components. They require hardness testing before they are installed onto the main unit - if the hardness is not within the specified standard, damage to the whole crane system may be caused.

Equotip 550 is the most versatile all-in-one solution for portable hardness testing. The Leeb hardness principle is based on the dynamic (rebound) method and is best suited for on-site testing to confirm whether transmission gear hardness is qualified after heat treatment process.
